(54) SERVER DEVICE, PORTABLE TERMINAL EQUIPMENT AND METHOD FOR PROVIDING CONTENTS

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a contents providing system capable of reducing the development load of contents such as a game program to be used for a portable terminal equipment.

SOLUTION: A program file not depending on a machine type necessary for the user of contents is transferred from a server device (10) to a portable terminal equipment (40). The terminal equipment (40) receiving the program file executes the program and returns data necessary for discriminating the type of the equipment (40) to the server device (10). The device (10) discriminates the type of the equipment (40) and transfers a data file suitable for the machine type. Consequently the development load of a contents program in each machine type can be reduced and the data volume of the contents in the server device (10) can be reduced.
